**Election/Restrictions**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-2, drawn to a catalyst, classified in class 502, subclass 305+.
  - II. Claims 3-8, drawn to a process of preparing a catalyst, classified in class 502, subclass 104+.
  - III. Claims 9-17, drawn to a process for the preparation of 2- and 4-picolines using a catalyst, classified in class 546, subclass 283+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, that the process as claimed can be used to make another and materially different product, such as refractory inorganic oxides or ceramic materials and adsorbents containing metal carbide or oxides other than those being claimed.
3. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the product as claimed can be used in a materially different process of using that product, such as in the hydrocarbon conversion processing of aromatic

Art Unit: 1754

compounds, hydrocracking of heavy oils, or purification of automotive exhaust gases from an internal combustion engine.

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions produce different products.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, III, etc. and have acquired a separate status in the art as shown by their different classification, and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. In the response to the restriction requirement filed on January 22, 2007, applicants had elected with traverse Group IV invention, claims 1-8 (drawn to a vanadotungstic acid catalyst on a support), for prosecution on the merits. However, the restriction should have been divided into three groups as shown above. Again, applicants are requested to make an election based on the above three groups (including previous election of species requirement) for prosecution on the merits. In accord with the MPEP rule, if the product claims are elected and found allowable, the nonelected process claims will be rejoined upon allowance.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8 Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1754

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
